

Wear Engine — Description of User Authorization Path

Mobile app: **EasyLink** (package: easylink.yvak.inc), Android

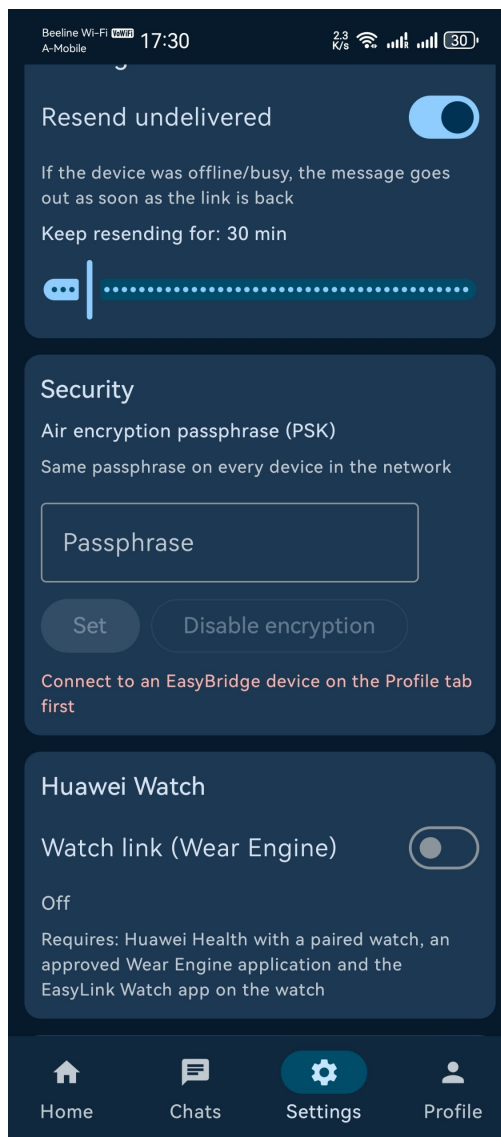

Wearable app: **EasyLink Watch** (bundle: inc.yvak.easylink.watch), HarmonyOS Lightweight Smart Wearable (Lite Wearable, JS)

Developer: Andrei Vermel (Yvak Inc.). Contact: pilipbox@mail.ru

Authorization steps (all actions are user-initiated)

#	User action	What the user sees
1	User installs EasyLink; Huawei Health is installed and a Huawei watch is already paired with the same HUAWEI ID.	Standard Huawei Health pairing (outside our app).
2	User opens EasyLink → Settings → card "Huawei Watch" and turns ON the switch "Watch link (Wear Engine)". The switch is OFF by default.	Card explains that messages and SOS will be mirrored to the watch.
3	Wear Engine permission dialog is displayed by HMS/Huawei Health.	System dialog asking to allow EasyLink to access the paired device. User taps Agree (or Cancel — the feature stays off).
4	Authorization completed.	The card shows status "Ready: <watch name>". From now on messages/SOS are forwarded to the watch app.
5	Revocation: user turns the switch OFF in EasyLink settings, or revokes the permission in Huawei Health.	Link stops immediately; no further data is exchanged.
